

**National Interagency Coordination Center
Incident Management Situation Report
Saturday, July 22, 2017 – 0530 MT
National Preparedness Level 4**

National Fire Activity

Initial attack activity:	Light (150) new fires
New large incidents:	9
Large fires contained:	8
Uncontained large fires:**	38
Area Command Teams Committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	5
Type 2 IMTs committed:	10

**Uncontained large fires include only fires being managed under a full suppression strategy.
[Link](#) to Geographic Area daily reports.

One MAFFS C-130 airtanker and support personnel from the 152nd Airlift Wing, (Nevada Air National Guard) has been deployed to Fresno, CA in support of wildland fire operations.

Active Incident Resource Summary

Northern Rockies Area (PL 4)

New fires:	28
New large incidents:	6
Uncontained large fires:	17
Type 1 IMTs committed	2
Type 2 IMTs committed	5

Powerline, Craig Mountain Area, IDL. IMT 2 (Almas). IMT is also managing the Corral Creek fire. Fifteen miles west of Winchester, ID. Brush and grass. Active fire behavior with backing, flanking and running. Structures threatened. Road and area closures in effect.

Corral Creek, Craig Mountain Area, IDL. Fifteen miles east of Anatone, ID. Brush and tall grass. Minimal fire behavior. Structures threatened. Road and area closures in effect.

* **Lodgepole Complex** (4 fires), Miles City District, BLM. IMT 2 (Connell). Includes previously reported South Breaks, Bridge Coulee, Square Butte and Barker fires. Fifty-two miles northwest of Jordan, MT. Timber, brush and short grass. Extreme fire behavior with long-range spotting, group torching and running. Sage-grouse habitat threatened. Structures threatened. Road closures in effect.

Sliderock, Lolo NF. IMT 2 (Leach). IMT is also managing the Little Hogback and Goat Creek fire. Twenty-eight miles southeast of Missoula, MT. Timber and closed timber litter. No new information.

Little Hogback, Lolo NF. Twenty miles northwest of Stevensville, MT. Timber. Active fire behavior with backing, creeping and isolated torching. Road and trail closures in effect.

* **Goat Creek**, Lolo NF. Nine miles southeast of Clinton, MT. Timber. Active fire behavior with torching, crowning and short-range spotting. Structures threatened. Evacuations, road, trail and area closures in effect.

Park Creek, Helena-Lewis and Clark NF. IMT 2 (Hutton). IMT is also managing Arrastra Creek fire. Two miles north of Lincoln, MT. Timber. Extreme fire behavior with crowning, running and short-range spotting. Structures threatened. Area closures in effect.

Arrastra Creek, Helena NF. Six miles northwest of Lincoln, MT. Timber. Extreme fire behavior with running, crowning and short-range spotting. Area closures in effect.

Sunrise, Lolo NF. IMT 2 (Pearson). IMT is also managing the Burdette fire. Eleven miles east of Superior, MT. Timber and brush. Active fire behavior with running, torching and spotting. Structures threatened. Road closures in effect.

Burdette, Lolo NF. Thirteen miles southeast of Tarkio, MT. Timber. No new information.

Lolo Peak, Lolo NF. IMT 1 (Poncin). Nine miles west of Carlton, MT. Timber. Active fire behavior with backing, flanking and running. Road, trail and area closures in effect.

Whetstone Ridge, Beaverhead/Deerlodge NF. Twenty-five miles southwest of Philipsburg, MT. Timber and heavy logging slash. Active fire behavior with torching and spotting. Area closures in effect.

Meyers, Beaverhead/Deerlodge NF. Twenty-five miles southwest of Philipsburg, MT. Timber and logging slash. Active fire behavior with spotting and torching. Area closures in effect.

Lookout, Central Land Office, Montana DNR. IMT 1 (Turman). Seven miles northwest of Sieben, MT. Timber. Minimal fire behavior. Residences threatened.

Crying, Petroleum County. Twenty miles northwest of Benzien, MT. Timber, brush and short grass. Extreme fire behavior with running, spotting and isolated torching. Structures threatened. Evacuations in effect.

* **Microwave**, Crow Agency, BIA. Thirty-seven miles southeast of Billings, MT. Brush and tall grass. Minimal fire behavior.

Magpie, Dakota Prairie National Grasslands. Forty-four miles northwest of Dickinson, ND. Brush and short grass. No new information.

* **Coyote**, Northern Cheyenne Agency, BIA. Twenty-two miles southwest of Ashland, MT. Timber and short grass. Extreme fire behavior with running, torching and spotting.

* **Chinn**, Central Land Office, Montana DNR. Started on county land 12 miles south of White Sulphur Springs, MT. Timber, brush and tall grass. Active fire behavior with wind-driven runs. Structures threatened.

Sage Hills, Yellowstone County. Four miles south of Billings, MT. Timber and brush. Minimal fire behavior. Residences threatened. Road closures in effect.

* 1 Hectare = 2.47 Acres

Predictive Services Discussion: Hot and dry conditions will continue across the West as high pressure slowly strengthens. While winds will be generally light, afternoon humidities will be low enough to sufficiently push fire activity. Across the Southwest, the strong monsoonal flow will continue to produce numerous showers and wet storms during the afternoon and evening hours. Looking elsewhere, a low pressure area moving west along the northern Gulf coast will produce very wet conditions along coastal areas. In Alaska, another weak cold front will move east along the North Slope producing scattered rain showers while high pressure over the interior keeps conditions warm and dry.

Cramer Fire - Idaho – July 22nd 2003

“May the lessons of the Cramer Fire not be lost on an Idaho ridge

This Day in History is a brief summary of a powerful learning opportunity and is not intended to second guess or be judgmental of decisions and actions. Put yourself in the following situation as if you do not know what the outcome will be. What are the conditions? What are you thinking? What are YOU doing?

Incident Summary: Central Idaho including the Salmon-Challis Nat'l Forest had been in a period of drought for the last 4 years. Spring and summer rainfall had lagged. 1630 July 20th a fire is reported in the area of Cramer Creek. Jumpers are dispatched and size up the Cramer Fire at 3 acres with high spread potential. High winds keep them from engaging the fire. Firefighters are flown in to a helispot (H1) on a ridge between Cramer and Cache Bar drainages, and due to fire behavior, do not engage the fire. The fire burns actively until 0230. By morning the fire is over 35 acres.

In addition to other air and ground resources, the Indianola helicopter H193 and Helitack crew report to the fire at 1515 on the 21st. By 1952 the fire is 200 acres. At 2000 fire intensity is reported to be low yet due to a thermal belt, the fire burns actively until 0300. Around 0930 the morning of the 22nd, H193 rappels two Helitack into a new helispot (H2) up the ridge from H1. Air attack reports fire perimeter is now over the ridge and in the Cache Bar drainage. The fire is now on both sides of the ridge that the helispots are on. Fire is active below H1. The Helitack are falling large trees on H2 to clear room for medium helicopters that had been ordered for a crew shuttle. H193 transitions to bucket work on H1 at 1127 and minutes later the firefighters on H1 pull back and retreat down the trail toward the river. 20 minutes later H1 is burned over. Fire activity is reported as “intense”.

By **1430** the fire in the Cache Bar drainage is an active fire front. At **1447** plans were made to remove the Helitack from H2. At **1500** the fire on both sides of the ridge begins to spread rapidly...Both helicopters assigned to the fire are at the helibase 15 minutes away for refueling and maintenance when the Helitack call for an immediate pick up. At **1505** they call again for immediate pickup. At **1509** they call for immediate pickup and report that they are fine just taking a lot of smoke. At **1513** the Helitack report fire and smoke below them and request immediate pickup. At **1519** Helitack contact helibase regarding status of helicopter. Arriving at the fire, the helicopter is unable to land due to smoke. Both rappellers leave H2 at **1520**. At **1524** the Cache Bar drainage is fully involved in fire. The rappellers make final call for immediate pickup... Both firefighters die soon after

History - The Salmon River Breaks area of the Salmon-Challis Nat'l Forest has a long history of entrapping firefighters; 161 to date. Steep slopes predispose areas to rollout and rapid, uphill fire growth commonly leading to extreme fire behavior and difficult suppression.

● *How can information about an area's fire history help your situational awareness?*

Size up – Crews are informed at the July 22 morning briefing that conditions will be getting progressively warmer and drier than previous days. Temperatures surpass 100°F and set record highs. RH's are 10-15%. Fuels in the Cache Bar drainage are short grass on the south aspects and nearly continuous fields of ceanothus on the north. Live fuel moistures are critically low and the Burn Index (BI) and Energy Release Component (ERC) indicate dangerous conditions.

- *Based on the predicted weather and the fire information above, what are your concerns?*
- *How could you and your crew safely engage a fire in a similar situation?*

L – The investigation report states that there were no effective lookouts for the rappellers at H2.

- *It is not uncommon to assign small squads to isolated tasks such as cutting helispots. The rappellers on H2 were clearing large trees to make a larger helispot. How would you and your crew maintain situational awareness of the fire and the felling operation at the same time?*

C – The rappellers were made aware of the low intensity fire in the Cache Bar drainage as soon as they were dropped off but the development of an active fire front in the Cache Bar drainage was observed by the lead plane and air attack 50 minutes before the fire reached H2. It was never communicated to them.

- *What will you and your crew do during any fire assignment to get accurate information about current fire behavior?*

E and S – There were no effective safety zones for the rappellers at H2 and once H1 below them burned over, the only way out was a helicopter.

- *Helicopters have become a common resource on fires transporting us to and from remote fireline, delivering our food, water, supplies, and medevac. But what would you do if the helicopter couldn't come? Discuss why depending on helicopters as an escape route is a bad idea?*

Incident Complexities - On any incident, we may or may not be aware of problems with incident management effectiveness, adequacy of resources, or other big-picture details.

Discuss how you and your crew will maintain safety without knowing these things

Have an idea? Have feedback? Share it.
